

WE TURN **CAR LIGHTS** INTO KEYCHAINS

We are now able to present a new type of recycled material – extracted from recycled Cars. The red tail lights are shredded and converted to the grains that we use. A 100% recycled material that gives our products a nice and deep red transparent colour.

Keychains made from this material will be an addition to our existing recycled collection.

CURRENT SELECTION

Our current selection consists of 4 keychains made of recycled car lights. For other request or more information, our sales team will be happy to assist you at info@poul-willumsen.com or tel. +45 44 95 52 00.
